Journal of Computational and Applied Mathematics 30 (1990) 359–360
North-Holland

# Author Index to Volume 30 (1990)

(The issue number is given in front of the page numbers.)

**Aihie, V.U.** and **G.A. Evans,** A comparison of the error function and the tanh transformation as progressive rules for double and triple singular integrals (2) 145–154
**Andrew, A.L.,** Eigenvalues and singular values of certain random matrices (2) 165–171

**Barron, R.M.,** see **Hamdan, M.H.** (1) 21– 37
**Brankin, R.W.,** see **Freeman, T.L.** (1) 71– 79
**Brezinski, C.,** Duality in Padé-type approximation (3) 351–357
**Brucker, P., R.E. Burkard** and **J. Hurink,** Cyclic schedules for *r* irregularly occurring events (2) 173–189
**Burkard, R.E.,** see **Brucker, P.** (2) 173–189

**Capobianco, M.R.,** A new proof for the convergence of the trigonometric method for the Abel integral equations of the first kind (*Letter*) (2) 247–250
**Chen, X.,** see **Yamamoto, T.** (1) 87– 97

**Dehesa, J.S.,** see **Marcellan, F.** (2) 203–212
**De Meyer, H., J. Vanthournout** and **G. Vanden Berghe,** On a new type of mixed interpolation (1) 55– 69
**de Oliveira, P.,** On a class of multistep methods with strong contractivity properties (1) 11– 19

**Evans, G.A.,** see **Aihie, V.U.** (2) 145–154

**Fazio, R.,** Numerical evaluations for shock and discontinuity velocity related to similarity solutions of quasilinear hyperbolic systems (3) 341–349
**Filippi, S.** and **F. Schöne,** Two high-order multistep methods with offstep points applied with a variable stepsize (2) 155–164
**Franco, J.M.** and **M. Palacios,** High-order P-stable multistep methods (1) 1– 10
**Freeman, T.L.** and **R.W. Brankin,** A divide and conquer method for polynomial zeros (1) 71– 79
**Fukushima, M.,** A conjugate gradient algorithm for sparse linear inequalities (3) 329–339

**Hamdan, M.H.** and **R.M. Barron,** A dusty gas flow model in porous media (1) 21– 37
**Hemker, P.W.,** A nonlinear multigrid method for one-dimensional semiconductor device simulation: results for the diode (*Letter*) (2) 117–126
**Hurink, J.,** see **Brucker, P.** (2) 173–189

**Ifantis, E.K.** and **P.D. Siafarikas,** Differential inequalities for the positive zeros of Bessel functions (2) 139–143
**Ioakimidis, N.I.,** Generalized Mangler-type principal value integrals with an application to fracture mechanics (2) 227–234

**Jódar, L.,** Boundary value problems for systems of second-order differential equations: approximations, convergence and upper error bounds (1) 39– 54

**Lynch, R.** and **H.A. Mavromatis,** *N*-dimensional harmonic oscillator yields monotonic series for the mathematical constant $\pi$ (2) 127–137

**Magnus, A.** and **J. McCabe,** On a continued fraction for $\log_e^2(1+x)$ (1) 81– 86
**Marcellan, F., J.S. Dehesa** and **A. Ronveaux,** On orthogonal polynomials with perturbed recurrence relations (2) 203–212
**Mavromatis, H.A.,** see **Lynch, R.** (2) 127–137
**McCabe, J.,** see **Magnus, A.** (1) 81– 86
**McClure, J.P.** and **R. Wong,** Multidimensional stationary phase approximation: boundary stationary point (2) 213–225

**Palacios, M.,** see **Franco, J.M.** (1) 1– 10
**Palamara Orsi, A.,** Spline approximation for Cauchy principal value integrals (2) 191–201
**Petković, M.S.,** On the efficiency of some combined methods for polynomial complex zeros (1) 99–15

**Rama Rao, K.,** see **Rios Neto, A.** (3) 257–281
**Rios Neto, A.** and **K. Rama Rao,** A stochastic approach to global error estimation in ODE multistep numerical integration (3) 257–281
**Ronveaux, A.,** see **Marcellan, F.** (2) 203–212

**Schöne, F.,** see **Filippi, S.** (2) 155–164
**Shen, Y.-Q.** and **T.J. Ypma,** Solving nonlinear systems of equations with only one nonlinear variable (2) 235–246

Elsevier Science Publishers B.V. (North-Holland)

**Siafarikas, P.D.**, see **Ifantis, E.K.** (2) 139–143
**Simos, T.E.**, A four-step method for the numerical solution of the Schrödinger equation (3) 251–255

**Vanden Berghe, G.**, see **De Meyer, H.** (1) 55– 69
**Vanthournout, J.**, see **De Meyer, H.** (1) 55– 69

**Westbrook, D.R.**, The obstacle problem for beams and plates (3) 295–311
**Wong, R.**, see **McClure, J.P.** (2) 213–225
**Wu, C.H.**, A multicolour SOR method for the finite-element method (3) 283–294

**Yamamoto, T.** and **X. Chen**, An existence and nonexistence theorem for solutions of nonlinear systems and its application to algebraic equations (1) 87– 97
**Yang, D.**, Mixed methods with dynamic finite-element spaces for miscible displacement in porous media (3) 313–328
**Ypma, T.J.**, see **Shen, Y.-Q.** (2) 235–246
